

Application field

INDUSTRIAL AUTOMATION

The customer's requirements

Management of the filling of tanks by monitoring of the weight.

Our solution

ET series 4-cell platform, with an antislip steel surface, connected to two DGTQFAN indicators, for monitoring the weight and for the semi-automatic management of the gas filling. The indicators communicate in real time with the information system through RS485, and transmit the weight to the PLC through a programmable 4-20mA analogue output.
